Communicate More Effectively

The Midwestern University Speech-Language Pathology team provides exceptional services for children and adults with communication and swallowing disorders. Our comprehensive approach includes the latest evidence-based, patient-centered care empowering clients to reach their communication goals. We offer the latest diagnostic and treatment technologies, including Computer Assisted Rehabilitation Environment (CAREN), augmentative and alternative communication devices, fiberoptic endoscopic evaluation of swallowing, and videostroboscopy to view vocal fold and swallowing anatomy.

Our Collaborative Care Model utilizes interprofessional teamwork among multiple disciplines to provide comprehensive therapy for clients with complex neurophysical conditions. We serve the community in unique ways through programs like intensive aphasia treatment camps and treatment groups that provide needed social support for those with a variety of communication disorders.

Midwestern University graduate students work with our licensed and certified Speech-Language Pathology faculty to provide comprehensive, individualized, and affordable care for adults and children with communication and swallowing disorders.

Our services include assessment and treatment for:

- Communication and cognitive problems resulting from stroke, dementia, or brain injury
- Feeding and swallowing disorders
- Voice and stuttering disorders
- Child language and speech disorders and delay
